**New W. M. Diesel
Engine Arrives**

A new Diesel locomotive, delivered yesterday to the Western Maryland railroad here, is being given its first test today between this city and Baltimore.

The locomotive, latest for freight service, has two units, each of which has 3,000 horsepower. It is expected that the locomotive will be capable of hauling 2000 tons of freight over the mountains.

Today's test is being made with a dynamometer car.
